General Information

Peeper 2100 2.3-inch Video Probe System Our most popular video probe for exploring small mammal burrows such as Kit Fox and Burrowing Owl dens. This versatile 2.3" Probe System is complete and ready to use for real-time inspections, day or night. Based on years of biologists' input, STI has refined the Peeper 2100™ to be a lightweight, easy to use and highly effective research tool. The Peeper 2100 video probe's 2.3-inch diameter, 4-meter long video probe easily navigates most burrows and animal dens. The standard IR illumination system allows the operator to see activity in complete darkness. The electronics chassis contains a 10-hour sealed battery. The US made Color -BW monitor is housed in a unique, Sandpiper engineered daylight readable kit designed to allow detailed observations of burrow inhabitants. The standard system includes a video output for recording. Your system arrives complete and ready to deploy including the probe, display, battery, charger and field case. The 2.3" inspection probe is water resistant, dirt resistant and is suitable for harsh environments. The Peeper 2100 system is compatible with all early design, "legacy" probes.

Peeper Camera & Illuminator Technical Specs: 1/3 inch CCD with f:3.5 lens (65 degree field of view); 512 x 492 pixels; focus range 10 mm to infinity; built-in Hi-brightness 940 nm. IR illumination source. Standard Output is IR illuminated Monochrome. The COLOR and Monochrome Option package allows observations in BOTH Color and IR Monochrome Consumes 0.95 watt.

Options & Accessories: Inquire about custom probe lengths, custom probes, audio capture (2.3" probe only). An ergonomic, Head-Mounted Video Display is available as an optional extra. **1 year warranty**
