## WhisperStation™-R

### Ultra-Quiet Computing for Researchers using R

Designed from the ground up for statistical research using R, the WhisperStation-R features up to 36 processor cores, 512 GB memory, an NVIDIA Quadro professional graphics engine, ultra-quiet fans & power supply, and one or more 24+” LCD monitors.

WhisperStation-R is available with 64-bit Linux and/or Windows operating systems. It can be custom-configured to exact user specifications, including large memory, large storage, and software tools & libraries. In addition to Revolution R Enterprise, it is available with applications including the Portland Group (PGI) compilers or the Intel Compilers & Performance Tools.

**Need more compute power?** Multiple WhisperStations can be linked together for a low priced, quiet HPC cluster running Revolution R Enterprise.
