3D Animation Software & Character Creator for professional artists and designers

Poser Pro is a powerful 3D character creator and animation tool, and includes ready to use content for graphics professionals, illustrators, animators and designers. For 20 years Poser has been the preferred 3D animation software and character creator for rendering static or animated digital content. Poser Pro includes robust 3D character creation tools including clothing fitting, morph target creation, weight mapping tools, network rendering and the full collection of Poser 10 features, but in a native 64-bit application. The included set of PoserFusion 2014 plug-ins are perfect for content integration with Lightwave, CINEMA 4D, 3ds Max and Autodesk Maya, as well as Z-brush via our Go-Z support.

- ✔ Render animation and 3D art with characters!
- ✔ Integrate Poser characters into professional 3D tools!
- ✔ 5GB ready to use content included!
- ✔ 64-bit performance on Mac and Windows systems!
- ✔ Poser Content Creation Tool Suite included!

Poser Pro Features

Poser Pro includes all Poser 10 features in addition to these exclusive Pro ONLY features.
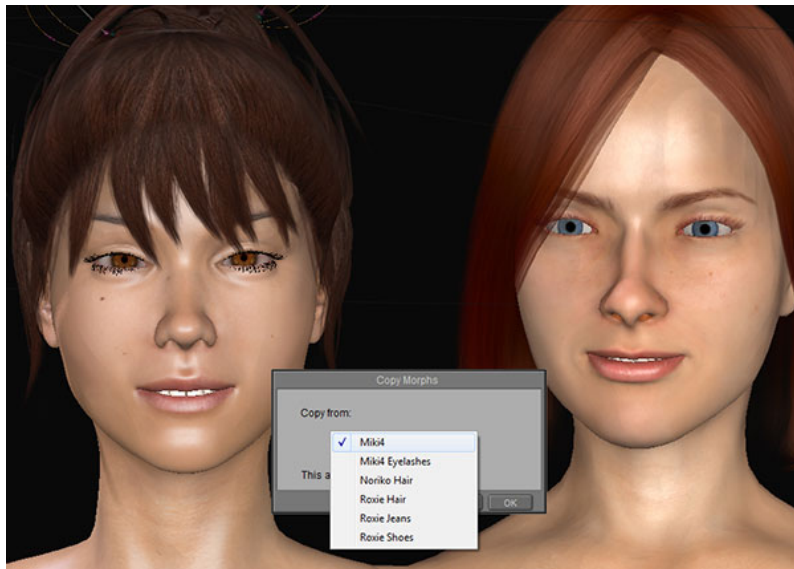

Fitting Room

Interactively fit clothing and props to any Poser figure and create new conforming clothing with the Fitting Room. Edit existing clothing to fit any weight mapped figure with five automatic methods, you can even transfer morph targets too!

Interactivly fit existing clothing and props to new figures, and then create new conforming clothing figures with morphs.

### Copy Morphs from Figure to Figure

Poser Pro features Morph Target Transfer to copy morph from one figure, to another. Poser clothing developers can now support a wide array of figures and include both full body and partial body morphs.

Copy Morphs

Weight Map Creation Tool Suite

Paint weight maps on any joint for super smooth and controlled bending, or use an existing figure and copy its weight map onto a new figure. Copy weight map symmetry from side to side or use a Use you pressure sensitive tablet to paint weight maps for the best bending characters.

Weight Map Creation Tool Suite

COLLADA and HDRI

For photorealistic texture creation, High Dynamic Range (HDRI) images are supported with full depth brightness and color. To transport Poser into a variety of powerful third party tools including Sketch-up, Modo and many other powerful pro-tools, we have one of the most robust COLLADA import/export pipelines available today.
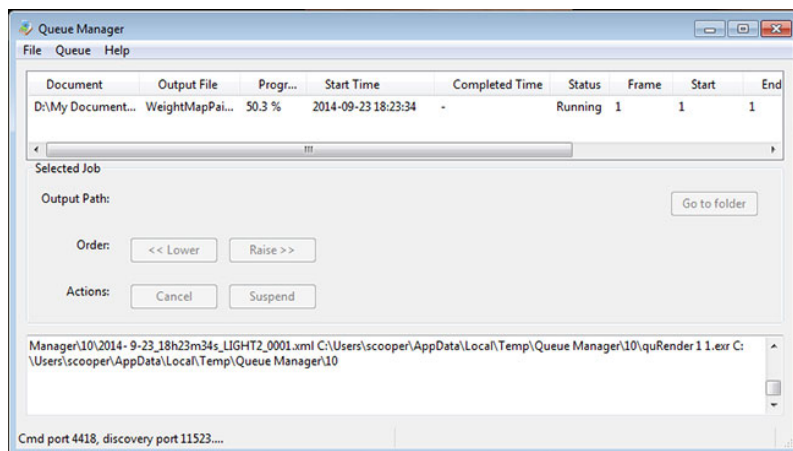

COLLADA and HDRI

PoserFusion Plug-ins

Our included PoserFusion plug-ins work with Lightwave, CINEMA 4D, Max and Maya, and allow you to import full Poser scenes including character rigging, textures and full dynamics.

Queue Manager and Network Rendering

The Queue Manager lets you manage rendering jobs to choose when you want to render, and which machine you want to use, and use your network of rendering computers to efficiently handle projects like animation.

Queue Manager and Network Rendering

All built on the foundation of Poser 10

Poser Pro is based on our popular Poser 10, with added features to support the 3D character needs of professional artists, animators and designers. Poser is the fastest way to add 3D figures into any project, animation or illustration. With an intuitive interface, Poser makes it easy to pose, animate and render.

Get all these powerful Character Animation features with Poser:

- Walk Designer for automated biped walk and run cycles

- Talk Designer to produce animated talking characters with nuances such as blinks and head nods

- Face Room photo-matching to transform Poser figures with imported photographs of real people

- Bullet Physics for dynamic rigid object and soft body dynamics to recreate bounce and jiggle

- Dynamic Hair and Cloth for stylized strand based hair and dynamic flowing cloth

- Content eco-system: A network of third party content developers has grown alongside Poser, including our own Content Paradise, providing Poser assets that cross every genre imaginable.
